debate

Mobility, new media, cloud computing and hi-end data processing are some of the next generation tools transforming the banking landscape in India. From being a mere differentiator, they are strengthening the bond with consumers by giving instant feedback and real-time analysis. This paradigm shift is here to stay and banks, regardless of whether they are private or government-owned, need to take cognizance of these technologies developments. Their Chief Information Officers need to take stock of these trends and convince bank managements that it's the need of the hour.

Mint brings together an eminent panel of industry experts to debate and deliberate these new-age technologies that is set to change the face of banking.
